

PROVEN PERFORMANCE

Sustainable low temperature asphalt, Midlothian
The ultimate fast, sustainable low temperature asphalt

ULTILOW

Product ULTILOW BASE AND BINDER COURSE

Client City of Edinburgh Council and Midlothian Council

Main Contractor Midlothian Council

Sub Contractor Tarmac Contracting

Location Waste treatment facility, Millerhill, near Dalkeith, Midlothian

Completion February 2015

ULTILOW

The ultimate fast, sustainable low temperature asphalt

CHALLENGE

As part of a partnership project between City of Edinburgh Council and Midlothian Council to build a new waste treatment facility in the Millerhill area of Midlothian, a new link road was required to connect the site to the local road network. Given the high local profile and the sustainable nature of the project, the client was keen that the project met the highest possible standards of sustainability. The project was scheduled for early February, with low seasonal temperatures expected on site.

OUR SOLUTION

After detailed consultation with the clients, Utilow was recommended as a base and binder course. Utilow is a range of low temperature asphalts, manufactured and supplied to comply with TRL Report PPR 666, within the 'Warm Mix' category. Utilow asphalts use proven technology to ensure that the material supplied performs as well as conventional hot asphalts, but with the added benefits of enhanced workability, improved sustainability and earlier reopening times to traffic.

RESULTS AND BENEFITS

Around 600 tonnes of Utilow asphalt base and a further 180 tonnes of binder course was laid over a three day period. The lower energy required during production and smaller carbon footprint helped Midlothian Council to achieve a more sustainable outcome for this project. Their contracting team also commented that they found Utilow easy to work with, even in the low winter temperatures experienced during the project. It also helped minimise programme times to help reduce costs and deliver value for local people.
