

PROVEN PERFORMANCE

HOUSE RENOVATION
BLAKENHALL, CHESHIRE

TOPFLOW SCREED A
SUPPLY & LAY

Product Topflow Screed A Supply & Lay
Client Ian Dale
Location Blakenhall, Cheshire
Date of completion 05/2016

Whilst project managing the renovation of his property, Mr Dale was keen to appoint only skilled tradespeople to ensure works were carried out to a high standard. He contacted Tarmac to discuss various screeding options for installation over under-floor heating.

THE CHALLENGE

With many available screed products on the market, Tarmac's client wanted to discuss the various options to enable him to make an informed choice over which product best met his project requirements regarding floor thickness, speed of installation and heat transfer.

"I researched online and found that Tarmac offered a range of flowing screeds that could be laid thinner. I contacted the area representative who visited site and gave me the best advice on how to proceed. I must say they really put my mind at ease" said Mr Dale.

OUR SOLUTION

Tarmac recommended Topflow Screed A which is perfect for installing over under-floor heating due to it's strength, high thermal conductivity and speed of installation.

120m² of the screed was professionally installed by Tarmac's Technical Sales Representatives in less than 2 hours.

RESULTS AND BENEFITS

"The finished floor looks fantastic and the local Tarmac team offered a great service visiting the site at least 4 times over the 2-3 months since I first made contact" said Mr Dale.

A benefit of Screed A is that it is highly fluid which means that it is easier to lay. It is also thinner than conventional screeds making it the natural choice for underfloor heating systems.

The local Tarmac team was on hand to offer helpful advice throughout and Tarmac's 'Supply & Lay' service provided the client with a hassle-free installation.
