NEAR MONMOUTH*

TOPFLOW SCREED C BELITEX
SUPPLIED BY ACE MINIMIX

Product Topflow Screed C Belitex supplied by Ace Minimix

Main contractor Flo-Screed

Location Maypole, nr Monmouth

Date of completion April 2017

When there was a small amount of screed left over from a customer's house extension project, Ace Minimix ensured it was put to good use.

THE CHALLENGE

Tarmac were asked to help Flo-Screed provide a fast drying flooring solution to a house extension project near Monmouth. This was to facilitate early laying of the floor covering.

Having frequently used Tarmac's flowing anhydrite screed, Topflow Screed A, Flo-Screed knew that Tarmac would be able to provide a suitable product that could be placed with just as much ease and speed but with the additional quick drying quality required for this particular project.

OUR SOLUTION

The proposed solution was Topflow Screed C Belitex - Tarmac's new fast drying cementitious flowing screed. This product can take foot traffic after 24 hours allowing follow on trades access to the area much quicker than normal.

The 3m³ load was supplied by Ace Minimix, Tarmac's small load specialists, but at the end of the installation, there was a small amount of screed left.

Interestingly the home owner had recently purchased a local village telephone box to save it from being removed. It needed a little TLC and the leftover screed provided the perfect flooring that it required!

RESULTS AND BENEFITS

Not only was the client extremely happy with the speed of installation and drying time of the flowing screed in their house, the telephone box is now on the way to being restored thanks to its new floor.

Ultimately it will be converted into a cabinet which will house a defibrillator to provide the local community with this life saving technology.

No job is too small for minimix!
