*TOPROC SY. MINISTRY OF DEFENCE TRAINING CAMP,
OTTERBURN*

TOPROC
SY

Product TOPROC SY (SCRAP YARD)
Client MINISTRY OF DEFENCE
Main contractor TARMAC CONTRACTING
Location MOD TRAINING CAMP, OTTERBURN
Date of completion 2004-2005

Tarmac's Toproc SY delivers high strength and impact resistance in the most challenging environments.

THE CHALLENGE

In order to improve their Otterburn training camp, the Ministry of Defence agreed to also enhance the surrounding area in terms of conservation and public access, while keeping disturbance of the lands to an absolute minimum. A major part of the project was the upgrading of 60km of carriageways facing heavy vehicle traffic daily.

OUR SOLUTION

To eliminate the environmental and social impact of truck movements, Tarmac installed a site batch concrete plant at the barracks. Over 40,000m³ of Toproc SY was supplied to upgrade the carriageways and 46 hard standings used for rocket and gunfire. To ensure the concrete supplied matched the surrounding environment, the Toproc mix was pigmented with Raven Grey colour.

RESULTS AND BENEFITS

The use of high strength Toproc SY ensured the training camp's enhancements were able to withstand the rigours of heavy vehicle traffic. Along with the sustainability benefits of using Toproc, the concrete's continued durability and resilience has also led to reduced costs for the MOD.
