

PROVEN PERFORMANCE

*Fast, single layer car park surfacing
Stansted Airport*

ULTIFASTPAVE

Product ULTIFASTPAVE

Client Stansted Airport

Main Contractor Tarmac Contracting

Location Stansted Airport, Essex

THE CHALLENGE

Following planing to replace the worn out car park with an SMA, it was evident that the lower layer condition of the existing car park would not compact to form the stable platform required to permit satisfactory surface course application.

OUR SOLUTION

ULTIFASTPAVE was recommended to provide a single combined binder and surface course layer. The properties of ULTIFASTPAVE allowed easier compaction to achieve a dense, low voids mixture that was capable of providing the durable surface required for the low speed but heavy volumes of traffic.

RESULTS AND BENEFITS

With the initial investigation of the site revealing the potential for more extensive works than was budgeted for the specification of ULTIFASTPAVE proved to be an effective solution both in terms of project cost and duration of work. The car park was completed quicker than the proposed traditional method by using the single layer solution. The finished product offering scuff resistance due to its low texture durable surface course.
