

ULTISPORT

TENNIS / MUGA

The ultimate specialist asphalt sports surfaces

Our ULTISPORT range of specialist asphalts are proven to deliver long term durability and performance.

Sports surfaces have very precise performance requirements. They need to be smooth and even to ensure consistent playing characteristics and durable enough to maintain this surface over time. They also need to be safe for users, to help reduce the risk of injury.

Having produced specialist sports surfaces for many years, Tarmac understand these requirements and have developed their latest range of products to deliver the safety and performance that players expect.

Tarmac ULTISPORT TENNIS is a high performance sports surface designed for outdoor Tennis courts. ULTISPORT MUGA is a versatile asphalt product designed for multi-use games areas.

The smooth and consistent playing performance of ULTISPORT TENNIS and ULTISPORT MUGA makes them the first choice for outdoor tennis courts and multi use games areas.

**ULTIMATE
SOLUTIONS**

ULTIMATE RESULTS

Ultimate performance

Both ULTISPORT TENNIS and ULTISPORT MUGA are available as a 6mm surface course, with the option of a 10mm or 14mm specialist binder course, delivering long term durability and the consistent performance that players expect.

Choice of colours

Available in black and red as standard, there are also a range of other colours available as part of our ULTICOLOUR range, with a choice of aggregate to suit site aesthetic requirements.

Lasting finish

ULTISPORT TENNIS and MUGA use aggregates specially selected for durability. ULTISPORT MUGA also incorporates a modified binder to provide the enhanced surface integrity required to cope with high volume team sports, improve workability and resist softening in summer.

Ultimate technology

ULTISPORT TENNIS uses innovative binder technology that makes it easier to lay and helps contractors to achieve a superior surface finish with enhanced long term durability.

Improved water clearance

Quicker draining than conventional asphalt, these specialist surfaces extend playing time for users, meaning that courts are available for use shortly after rainfall.

Ultimate solutions

Available with a range of different aggregates to suit client specifications and site requirements.

HOW IT WORKS

Improved quality and safety

Consistency of production and laying are critical to both the playing characteristics and long term performance of any specialist product. Our Third Party Accreditation procedures ensure that a consistently high quality product is supplied at all times.

The porosity of both ULTISPORT TENNIS and ULTISPORT MUGA reduce the impact of surface water, thereby reducing the risk of slipping and ice formation in cold weather conditions. This optimises the availability of courts, minimising restart delays after rainfall, and reduces the risk of injury to players.

Superior playing performance

Sports surfaces require a highly consistent finish to deliver superior playing characteristics. Using selected 6mm aggregate and a modified binder ULTISPORT MUGA makes it easier to achieve the compaction and finish required for a smooth, even playing surface.

PROVEN PERFORMANCE

ULTISPORT TENNIS *Hucknall Tennis Club*

CHALLENGE

Hucknall Tennis Club required a cost effective asphalt surface to replace their aged and worn outdoor tennis courts. The courts were heavily used throughout the year and needed improved drainage characteristics to avoid standing water and maximise playing time for club members.

SOLUTION

After meeting the client to find out more about their requirements, ULTISPORT TENNIS was recommended as a binder and surface course to create an even, free draining playing surface.

RESULT

The finished court provided excellent playing performance and was very popular with club members. Replacing the old worn and loose court surface with a new stable, cohesive binder and surface course resulted in improved safety and grip for players. The porous, well drained surface also meant that the courts could be reopened quickly after heavy rainfall.

ULTISPORT MUGA *Sporting academy, Nottingham*

CHALLENGE

The existing outdoor multi-sports pitch at this prestigious sporting academy in Nottingham was worn from frequent, heavy use and was retaining water, which was restricting availability and compromising student safety.

SOLUTION

ULTISPORT MUGA was recommended as a porous binder and surface course system to solve the problem of standing water and resist frequent, heavy use throughout the year.

RESULT

The project was completed within the budget and timescale required by the client. The porous binder and surface course solution eliminated the problem of surface water, thereby optimising availability for the students. The modified binder has helped to maintain the even, stable finish and avoid the safety problems associated with loose aggregate.

**EXPERT ADVICE
AND SUPPORT**

No two projects are exactly the same. By combining our unique experience in asphalts with our unparalleled access to high quality aggregates we are able to supply solutions that perfectly match client requirements.

Typical Applications

ULTISPORT TENNIS and ULTISPORT MUGA build upon Tarmac's impressive heritage and experience of supplying high performance outdoor sports surfaces.

ULTISPORT TENNIS is available as a surface course and normally laid to a depth of 25 - 30mm. A permeable binder course is also available, designed to aid drainage, with a recommended layer depth of at 35 - 55mm.

ULTISPORT TENNIS uses an innovative modified 100/150 pen binder to improve workability and help contractors achieve a superior finish.

OUR SUPPORT

FAQs

Where can I use ULTISPORT MUGA?

ULTISPORT MUGA is a versatile product, suitable for a wide range of sporting applications from hockey pitches to basketball courts.

Are ULTISPORT TENNIS and ULTISPORT MUGA available in any other colours?

ULTISPORT TENNIS and ULTISPORT MUGA are available in back or red as standard. For improved visibility and aesthetics, Tarmac ULTICOLOUR is available in a range of colours and can be supplied with selected aggregate to suit client specifications and site requirements.

How does ULTISPORT TENNIS and ULTISPORT MUGA improve playing performance?

The smooth, even surface provides consistent playing performance, for predictable bounce and grip.

What other drainage solutions do Tarmac supply?

ULTIFLOW is a range of permeable drainage aggregates with a proven history of effective performance. Our contracting division can also design and install ULTISuDS, a complete sustainable drainage system.

How does ULTISPORT MUGA improve safety?

The modified binder locks in aggregate, improving surface integrity and reducing the risk of injury to players. Both ULTISPORT TENNIS and ULTISPORT MUGA also offer enhanced drainage, eliminating the problem of standing water and ice formation.

What other specialist sports surfaces are available?

Tarmac also supply ULTITRACK a high performance asphalt designed specially for Velodromes that has been used in some of the UK's leading outdoor tracks.
