

Energy and greenhouse gas

Tarmac is the UK's leading sustainable building materials and construction solutions business. Our innovative products and solutions not only deliver the infrastructure needed to grow the UK economy today but also help to create a more sustainable built environment for the country's long term future.

This policy confirms our approach to play an active role in tackling climate change. We will do this by improving our energy efficiency performance, reducing our carbon footprint and supporting our customers with innovative, sustainable products, services and solutions which contribute to a low carbon built environment, and to climate change mitigation.

To support our approach we will ensure that we:

- Comply with all energy and carbon legislation and other voluntary codes or practices
- Set objectives and targets, act and review performance to reduce energy consumption and greenhouse gases
- Secure line management responsibility for continually seeking new ways to improve energy efficiency performance and reducing the carbon footprint of our business and products

- Review energy opportunities and implement energy management plans and targets at all sites
- Train employees in energy and greenhouse gas management, appropriate to their role
- Continue to implement opportunities to use waste-derived fuels, biomass fuels and renewable energy sources
- Invest in low carbon, energy efficient technologies and ensure that energy efficiency and greenhouse gas emissions are considered in our business decisions Engage with our supply chain to reduce impacts associated with the products and services we buy
- Support customers to take advantage of our products' whole life benefits in mitigating and adapting to climate change
- Actively engage with trade and public bodies to develop and implement good practice
- Regularly review and report on our performance and check that this policy remains relevant to our business and stakeholder needs
- Provide products, services and solutions which contribute whole-life, low carbon benefits to the built environment. We will deliver this by continually improving our energy efficiency performance, and reducing the greenhouse gas emissions associated with our business.

The overriding principle is that accountability for energy and the management of greenhouse gas emissions starts with the Tarmac Executive Committee. In fully supporting and endorsing this approach we will not only be visible in its delivery but also make the necessary information and resources available to implement it. This policy will be reviewed, as a minimum, annually. Tarmac is the UK's leading sustainable building materials and construction solutions business. Our innovative products and solutions not only deliver the infrastructure needed to grow the UK economy today but also help to create a more sustainable built environment for the country's long term future.
