ULTIPAVE D

A dense, durable asphalt designed for long-term performance on low speed roundabouts

ULTIPAVE D is a high-performance, 10mm dense asphalt designed to resist pavement deformation and premature wear on heavily trafficked low speed roundabouts and other high stressed locations.

ULTIMATE LONG TERM DURABILITY

Specifically designed to deliver a lower texture, denser formulation than our normal 10mm ULTIPAVE. The use of high quality aggregates together with additional binder ensures that ULTIPAVE D provides a dense, durable finish that resists the intense lateral forces found on highly trafficked roundabouts.

REDUCED MAINTENANCE REQUIREMENTS

ULTIPAVE D extends pavement life, reducing the need for resurfacing and associated road closures at vital junctions. As a result it improves long-term asset management and service to road users.

PROVEN PERFORMANCE

Supplied for over 10 years as a bespoke design to a wide range of clients, ULTIPAVE D has an impressive record of performance on some of the busiest roundabouts and junctions on the UK road network.

EXCEPTIONAL CONTROL

Our stringent quality control processes, from design to laying, ensure exceptional control over the quality and consistence of finished asphalt surfaces.

ULTIMATE QUALITY

Our third party accredited ISO 9001 Systems and BBA certification ensures a consistently high quality product is supplied at all times.

ULTIMATE SUPPORT

At Tarmac, technical excellence comes as standard. ULTIPAVE D is only available for installation by accredited contractors who have full access to our expert training, advice and technical support or by our own expert Contracting division. This ensures it is laid to the highest industry standards.
