

*ULTI*CRETE

The ultimate heavy duty solution

ULTICRETE

The ultimate heavy duty solution

The result of Tarmac's unrivalled expertise in cement and asphalt technology, ULTICRETE is an advanced grouted asphalt solution that offers outstanding resistance to deformation and long term durability in the most challenging environments.

ULTIMATE STRENGTH

Exceptional resistance to deformation and cracking from heavy point loading.

EXCEPTIONAL DURABILITY

Ability to withstand the extreme turning forces generated by the movement of heavy vehicles and associated point loading.

FASTER COMPLETION

As a practical and durable alternative to concrete in appropriate environments. ULTICRETE is jointless, can be installed quickly and can be used soon after construction. It can withstand pedestrian traffic in as little as three hours and vehicle traffic within 24 hours.

CHEMICAL RESISTANCE

Excellent resistance to fuel spillage including aviation fuel, diesel, de-icers and petrol.

LASTING PERFORMANCE

Proven to deliver lasting performance in the most extreme environments including aircraft refuelling areas, container ports, bus stations and distribution centres.

ULTIMATE SUPPORT

At Tarmac, technical excellence comes as standard. ULTICRETE is only available for installation by our own expert Contracting division who evaluate the pavement design and each site to make sure our clients get the right solution and then deliver it to the highest industry standards.
